

Dashboard Analysis Report

[Dashboard Link](#)

Key Finding: Only 24.4% of searches result in a completed ride. The platform loses riders at every stage of the funnel, with the biggest single drop at the Search to Quote stage (47.2% lost) and a 44.7% booking cancellation rate driven primarily by drivers.

Platform KPI Overview

Metric	Value	Benchmark Signal
Total Searches	6,273	Top of funnel demand
Searches with Quotes	3,315	52.8% got a driver quote
Total Bookings	2,776	83.7% of quoted searches
Completed Rides	1,532	55.2% of bookings
Cancelled Bookings	1,242	44.7% cancellation rate
Overall Conversion	24.4%	Search to completion

Q1. Conversion Funnel Deep Dive

The funnel tracks every rider from initial search to completed ride. Each stage represents a gate that riders must pass through. Drop-off at each stage indicates a different root cause requiring a different intervention.

1.1 Overall Funnel Conversion

Funnel Stage	Count	Conv. from Previous	Conv. from Search
Search	6,273	—	100%
Quote (got driver offer)	3,315	52.8%	52.8%
Booking (confirmed)	2,776	83.7%	44.3%
Completed	1,532	55.2%	24.4%

Key Insight - The biggest single drop is Search to Quote - 47.2% of riders who searched never received a single driver quote. This is a supply availability problem, not a UX or pricing issue.

1.2 Funnel by Time of Day

Bookings were segmented into 4 time slots based on booking_created_at timestamp (UTC).

Time Segment	Bookings	Completed	Completion %	Cancellation %
--------------	----------	-----------	--------------	----------------

Morning (6-10am)	592	361	61.0%	39.0%
Day (10am-5pm)	1,237	608	49.2%	50.7%
Evening (5-9pm)	45	17	37.8%	62.2%
Night (9pm-6am)	902	546	60.5%	39.5%

Maximum drop : Evening (5-9pm) has the worst completion rate at 37.8% - but also the fewest bookings (only 45). This suggests most evening searches fail before booking, pointing to a severe supply shortage at peak commute time

1.3 Funnel by Trip Distance

Distance Segment	Bookings	Completed	Completion %	Cancellation %
Short (<5km)	706	337	47.7%	52.1%
Medium (5-15km)	1,462	846	57.9%	42.1%
Long (>15km)	608	349	57.4%	42.6%

Maximum drop: Short trips (<5km) have a 52.1% cancellation rate - 10 percentage points higher than medium or long trips. Drivers actively avoid short trips because low fares don't justify pickup effort

1.4 Hypotheses and Validation

Hypothesis 1: Evening supply shortage

Evening (5-9pm) achieves only 37.8% completion despite being peak commute time. With only 45 bookings in this slot vs 902 at night, most searches fail before reaching booking stage - confirming drivers are offline or unavailable.

Validation: Evening driver cancellations show NOT_REACHABLE and excess baggage as top reasons - consistent with fatigued or selective drivers.

Hypothesis 2: Short trips economically unattractive to drivers

Short trip cancellation rate (52.1%) is 10pp higher than medium/long. PICKUP_LOC_TOO_FAR appears as the 2nd most common cancellation reason for short trips (43 cases) - drivers cancel when pickup distance exceeds the trip value.

Validation: 72% of all driver cancellations occur when pickup distance exceeds 1km - confirming drivers calculate effort vs. earnings before cancelling.

Hypothesis 3: Search to Quote gap is pure supply, not UX

2,958 searches (47.2%) received zero driver quotes - this happens before any rider sees pricing or UX. No driver was online or willing to respond. This is a supply density problem.

Validation: Day slot (10am-5pm) has the highest booking volume (1,237) but also the worst daytime cancellation rate (50.7%), confirming demand exceeds available quality supply throughout the day.

Q2. Booking Cancellations Analysis

2.1 Overall Cancellation Rate

Metric	Value	Implication
Overall Cancellation Rate	44.7%	Critical - 3x industry benchmark of 15%
Driver Cancellations	766 (60.6%)	Primary driver of platform churn
Rider Cancellations	496 (39.3%)	Secondary - often response to poor supply
App Cancellations	1 (0.1%)	Negligible

2.2 Cancellations by Pickup Distance

Pickup distance (distance_to_pickup from quote_data) was bucketed into 3 ranges to understand driver cancellation behaviour.

Pickup Distance	Driver Cancels	Rider Cancels	Key Pattern
Near (<500m)	66	69	Roughly equal - not distance driven
Mid (500m-1km)	149	106	Driver cancels begin to dominate
Far (>1km)	551	321	72% of all driver cancels happen here

Key finding - 72% of driver cancellations occur when the driver is more than 1km from the rider. Proximity at time of matching is the single strongest predictor of a driver cancellation.

2.3 Cancellations by Trip Distance

Trip Distance	Cancellation %	Signal
Short (<5km)	52.1%	Highest - drivers avoid low-value short trips
Medium (5-15km)	42.1%	Baseline cancellation rate
Long (>15km)	42.6%	Similar to medium - distance not a factor above 5km

2.4 Top 3 Driver Cancellation Reasons

Rank	Reason Code	Count	% of Driver Cancels	Pattern
1	NOT_REACHABLE	204	26.6%	Rider couldn't be contacted - across all time slots
2	PICKUP_LOC_TOO_FAR	141	18.4%	Driver rejects distant pickups - peaks for short trips
3	VEHICLE_ISSUE	140	18.3%	Vehicle unavailable - peaks during Day slot

2.5 Cancellation Reasons by Time of Day

Time Slot	#1 Reason	#2 Reason	#3 Reason
Morning (6-10am)	NOT_REACHABLE (42)	PICKUP_LOC_TOO_FAR (37)	ACCEPTED_BY_MISTAKE (23)
Day (10am-5pm)	NOT_REACHABLE (101)	PICKUP_LOC_TOO_FAR (73)	VEHICLE_ISSUE (73)
Evening (5-9pm)	NOT_REACHABLE (4)	TOO_MUCH_PASSENGERS (1)	EXCESS_LUGGAGE (1)
Night (9pm-6am)	NOT_REACHABLE (65)	VEHICLE_ISSUE (50)	ACCEPTED_BY_MISTAKE (35)

Key finding - NOT_REACHABLE is the #1 cancellation reason across every time slot - morning, day, evening, and night. This is not a time-specific problem. It is a systemic rider reachability gap that requires a platform-level fix before booking confirmation.

2.6 Driver Rating vs Cancellation Rate

Rating Bucket	Drivers	Total Cancels	Avg Cancels per Driver
Low (<3.5)	8	4	0.50
Mid (3.5-4.0)	22	6	0.27
Good (4.0-4.5)	235	63	0.27
Excellent (4.5+)	1,423	295	0.21

Key insight - Low-rated drivers cancel at 2.4x the rate of excellent drivers (0.50 vs 0.21). However, excellent-rated drivers contribute 295 of the total 766 driver cancellations - meaning cancellation is a platform-wide behaviour problem, not just a low-quality driver issue. Rating-based filtering alone will not fix the cancellation rate.

My Recommendations

1. Fix the Search-to-Quote gap. 47.2% of searches get zero driver responses. Introduce surge-style driver online-time incentives during Day (10am-5pm) - the highest demand slot with only 49.2% completion. Target: increase Search-to-Quote conversion from 52.8% to 70%+.
2. Implement proximity-based matching cap. 72% of driver cancellations happen when pickup distance exceeds 1km. Set a hard matching threshold of 800m between driver and rider. This structurally reduces PICKUP_LOC_TOO_FAR cancellations without any driver behaviour change required.
3. Add pre-booking rider reachability check. NOT_REACHABLE is the #1 cancellation reason across all time slots (26.6% of driver cancels, 204 cases). Before confirming a booking, trigger an in-app ping or call to verify rider is active. Only assign a driver after rider confirms. This prevents wasted driver effort and reduces 1 in 4 driver cancellations.
